◀ The Olden Days

Creation distinct from publication

High barrier to collaboration

Everyone for themselves

Share as late as possible, if at all

Us/them dichotomy, outsiders as liability

What's a wheel? :see_no_evil:

Bespoke Collaboration

Discussions happen in private (:e-mail:, hallway)

Changes made opaquely, manually

Organization knowledge stored in people

Low fidelity (memory, :bus: factor, :watch:)

:calendar:, blockers as a sunk cost

Thanks @pborrelli

We cherry-picked your typo commits: [ad350b5](#) , [df42192](#) , [a6cd8e8](#) .

As @greggles mentioned, the govdelivery updates should be contributed on the [govdelivery project page](#). We had to fork our own module a little, but we will take your commits under advisement when we update the module on drupal.org

The White House Open Data Policy

PROJECT OPEN DATA

Open Data Policy – Managing Information as an Asset

1. Background

Data is a valuable national resource and a strategic asset to the U.S. Government, its partners, and the public. Managing this data as an asset and making it available, discoverable, and usable – [in a word, open](#) – not only strengthens our democracy and promotes efficiency and effectiveness in government, but also has the potential to create economic opportunity and improve citizens' quality of life.

For example, when the U.S. Government released weather and GPS data to the public, it fueled an industry that today is valued at tens of billions of dollars per year. Now, weather and mapping tools are ubiquitous and help everyday Americans [navigate their lives](#).

The ultimate value of data can often not be predicted. That's why the U.S. Government released a [policy](#) that instructs agencies to manage their data, and information more generally, as an asset from the start and, wherever possible, release it to the public in a way that makes it open, discoverable, and usable.

The White House developed Project Open Data – this collection of code, tools, and case studies – to help agencies adopt the Open Data Policy and unlock the potential of government data. Project Open Data will evolve over time as a community resource to facilitate broader adoption of open data practices in government. Anyone – government employees, contractors, developers, the general public – can view and contribute. Learn more about [Project Open Data Governance](#) and dive right in and help to build a better world through the power of open data.

Answer W3C Candidate for Open Government Linked Data

Hi, I'm interested in the W3C Candidate for Open Government Linked Data. I'm currently working on a project that involves a lot of data and I'm looking for a way to make it more accessible and easier to use. I'm interested in the W3C Candidate for Open Government Linked Data because it seems like it could be a great way to do that. I'm currently working on a project that involves a lot of data and I'm looking for a way to make it more accessible and easier to use. I'm interested in the W3C Candidate for Open Government Linked Data because it seems like it could be a great way to do that.

Thank you to everyone on this thread for the very interesting conversation. @benbalter said it best-- this is exactly why we are excited about Project Open Data, and the opportunity this provides for continual iteration and improvement.

Looks like there is agreement on adding @jqnatividad suggested link. 👍 Merging now.

Thank you all for contributing and we're looking forward to many more discussions and pull requests to come. 🇺🇸
