Several statutes and executive orders, including the National Environmental Policy Act (NEPA), the Small Business Regulatory Enforcement Fairness Act (SBREFA), and Executive Order 12866, require federal agencies to identify and consider alternative regulatory approaches before proposing certain new rules. Even when agencies are not required to consider alternatives, however, it often results in better-informed decision making and improved regulations. In this context, a “regulatory alternative” is used broadly and could mean, among other things, a different method of regulating, a different level of stringency in the regulation, or not regulating at all.

When considering these alternatives, agencies can also solicit input early in the process from members of the public or government officials who have relevant and useful knowledge. The Administrative Conference has recommended that agencies engage with members of the public throughout the rulemaking process, including seeking input while the agency is still in the

1. 42 U.S.C. § 4332(C)(iii) (requiring agencies to consider alternatives in environmental impact statements under NEPA).
2. 5 U.S.C. § 603(c) (requiring agencies to consider alternatives in regulatory flexibility analyses conducted under the Regulatory Flexibility Act of 1980, as amended by SBREFA).
early process of shaping a rule. Seeking early input before issuing a notice of proposed
rulemaking can often help agencies learn more about the benefits, costs, and technical feasibility
of the alternatives they are considering and identify different approaches they might not have
considered otherwise. This is especially true when agencies reach out to a wide range of
interested parties, including affected groups that are traditionally underrepresented in the
administrative process.7

Nevertheless, seeking early input on alternatives may not be appropriate in all cases. In
some instances, the alternatives may be obvious. In others, the subject matter may be so obscure
that public input is unlikely to prove useful. And in all cases, agencies face resource constraints
and competing priorities, so they will need to consider whether the benefits of early outreach
outweigh the costs, including the resources required to conduct the outreach. Similarly, if
agencies choose to solicit early input, they will need to tailor their outreach to ensure that they
are soliciting input in a way that is cost-effective and that maximizes the likelihood that they will
get useful information.

When agencies seek early input, documenting this outreach and what alternatives were
suggested, subject to confidentiality and privacy concerns, benefits both agencies and the
public.8 Transparency around these discussions gives the public a full picture of the agency’s
work, avoids comments that suggest alternatives the agency has already analyzed, and makes it

easier for a court to review the agency’s decision-making process.

RECOMMENDATION

1. When determining whether or not to seek early input on regulatory alternatives from knowledgeable parties, agencies should consider factors such as:
   a. The extent of the agency’s familiarity with the key regulatory alternatives;
   b. Whether the issue being regulated or any of the alternatives suggested are novel;
   c. The amount of new technology or technical knowledge involved in the alternatives;
   d. The complexity of the underlying policy question and the proposed alternatives;
   e. The potential magnitude of the costs and benefits of the alternatives proposed;
   f. Whether the selection of an alternative is likely to be controversial; and
   g. The time and resources that conducting such outreach would require.

2. Agencies should consider, consistent with available resources, the following methods of soliciting public input in determining what outreach they wish to undertake concerning possible regulatory alternatives:
   a. Meetings with interested parties, held regularly or as-needed based on rulemaking activities;
   b. Listening sessions;
   c. Internet and social media forums;
   d. Advisory groups;
   e. Focus groups;
   f. Advance notices of proposed rulemakings (ANPRMs);
   g. Requests for information (RFIs);
   h. Citizen juries; and
   i. Negotiated rulemaking.

Agencies should consider whether these methods will engage a wide range of interested parties, including individuals and groups who are affected by the rule and traditionally

Commented [LAS1]: For Committee Consideration: The Committee members may wish to suggest additional factors that agencies should consider, based on their own experiences.

Commented [LAS2]: For Committee consideration: The Committee members may wish to suggest additional methods of soliciting early input, based on their own experiences.
underrepresented in the rulemaking process.

3. If agencies are unsure of which methods will best meet their needs and budgets, they should consider testing different modes of soliciting public input on the regulatory alternatives they are considering before issuing notices of proposed rulemaking (NPRMs). As appropriate, the results of this outreach should be detailed in the NPRMs for which they are used.

4. Agencies should ensure that all relevant officials within the agency, including economists, scientists, and other experts, have an opportunity to identify potential regulatory alternatives during the early input process. As appropriate, agencies should also reach out to select experts in other agencies for input on alternatives.

5. Agencies should provide a full discussion of the alternatives considered, including alternatives they ultimately rejected in the NPRM. To the extent that agencies are concerned about revealing the identity of the individuals or groups offering proposed alternatives due to privacy or confidentiality concerns, they should list the alternatives without ascribing them to any particular individual or group.

6. In the discussion of alternatives in the preamble of a proposed rule, agencies should also include any alternatives that were suggested through early public input, but which agencies believe are precluded by statute, along with an explanation of their views on the legality of those alternative policy choices.

7. An interagency working group should be convened to share the results of agency efforts to solicit early input on regulatory alternatives and to systematically gather other data on the effectiveness of these approaches in order to produce guidance on best practices for early engagement with interested parties.

Commented [LAS3]: For Committee consideration: The committee should consider what agency or organization should be tasked with convening such an interagency group.
