Complaints about the USPTO and small entity inventors abound. Questions go unanswered. Wrong information is disseminated, to me for damn sure. I called to ask the last date I had to respond to a correspondence and the date I was given was July 23, 2020. Having my response prepared and ready to send two weeks prior to that time, I get a letter from the USPTO telling my my application had been permanently terminated! Obviously no one at USPTO would take responsibility for this error. Well this is not the only problem Ive had.

I am 80 years old and a small entity inventor. I will not give up because this invention will save millions of lives and tens of millions of injuries world wide each year. My great fear is some corporation whose bottom line will be seriously affected has an insider who is trying to drygulch my application or that if and when my application can no longer be viable, they will scoop it up and put it on a shelf somewhere.

I dont even know how many others have been treated in this manner....quite like lowly pawns and at the same time allowing major corporations to 'get their way'. This certainly is a violation of the 14th Amendment to the United States Constitution. A real opportunity to file a complaint in a Federal District Court. (PS: I was the first person on the planet to file a complaint against spraying ROUNDUP over 25 years ago)

Regards,  
Samuel M. Hay, III

#16/449/549 and there is another.

PPS: When asked the USPTO  
When a claim is denied is it because of nomenclature or because they have found something similar already patented? How would you know? I am yet to receive a response on this question. All it would take would be a symbol at the end of the denial such as (P) meaning something similar has been found or (N) nomenclature meaning the wording is not sufficient.
