

Comment from b ker in response to Request for Information for *Identifying and Reducing Burdens in Administrative Processes*
February 21, 2023

1. affordability internet act - paper applications are thrown out. 7 months i have sent in 3 paper applications for which i have postal receipts. this agency has never acknowledged receiving the applications. they lie to you on the telephone., they say their supervisor will call you back in two days. 4 times i have thus been lied to.

2. mediocre that you pay for is inept and the doctors don't pay attention to you. you get 3 minutes and they regard your body as pieces so that nothing hurts something else., bad return for the money.

3. reductions never help. they are just to act as if something has been accomplished when nothing really has.

4. covid made everything much worse. nothing worked right about covid. don't keep anything from covid, shut down the cdc and nih permanently.

5. Biden administration is generally abusive to American citizens, inept, negligent and absent most of the time.

6. collaboration means agencies don't listen to the citizens of the country anymore. they just talk to each other and like that the other agency says and then ignore the citizens. that is not the way American government was supposed to run.

7. collaboration with private groups like environmental groups. the president never tells the members what he is saying and never gets a vote to say what he says. it's all fake at the top. never join an environmental group.

the general federal agency level of competence has gone down to a terrible low. most have no confidence in our government. the FBI after people at school board meetings when there is local control there. the color of your skin being the only determinant of whether you get a job ever anymore and white men being totally discriminated against. the country is sinking every day under Biden, this comment is for the public record.
